Match Play Golf Course Turf Colorant

Painting vs. overseeding? Match Play Turf Colorant saves time, money and water.

Avoid the transition period with the company that is #1 in turf paint. Match Play turf colorant is more durable, affordable and offers a variety of natural colors.

Match Play™ Turf Colorant

Introducing an array of golf course turf colorants made specifically for golf courses as an alternative to overseeding with perennial ryegrass. Our colors were developed through a combination of academic research and practical application, creating consistent colors that will not fade to blue.

MatchPlay™ Colors:

Course Utilization

Eliminate the course downtime required for bermuda grass germination to take place.

Sustain a Stronger Stand

Overseeding over long periods of time can create a weaker strand of bermuda grass.

Water Conservation

Match Play colorized turf requires far less water than overseeded perennial ryegrass.

Consistent Turf Color

Match Play colors allow you to choose consistent colors to maintain contrast between greens, collars, tees and fairways.

Increased Playability

Dormant Bermuda grass can create subtle changes in course conditions, placing more focus on club and shot selection

No Transition Problems

Bermuda grass will green up sooner and more consistently in the spring without competition from perennial ryegrass and poa trivialis.

Lower Maintenance Costs

Eliminate direct cost of seed as well as the indirect maintenance costs of mowing, fertilizing, watering and applying herbicides and pesticides.

Ease of Weed Control

Controlling fungi with herbicides and fungicides is easier in dormant bermuda grass as compared to overseeded perennial ryegrass.
