Operation / Repair / Parts

BRITE STRIPER

3000 SP

Airless Line Stripper

- For the application of athletic field line striping materials -

Model 867786
3000 psi (20.7 MPa, 207 bar) Maximum Working Pressure

**Warnings**

The following are general warnings related to the safe setup, use, grounding, maintenance and repair of this equipment. In the text of this manual, the exclamation point symbol alerts you to a warning and the hazard symbol refers to specific risks. Refer back to these General Warnings pages. Additional procedure-specific warnings will be included where applicable.

<table>
<thead>
<tr>
<th>Warnings</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>EQUIPMENT MISUSE HAZARD</strong></td>
</tr>
<tr>
<td>Misuse can cause death or serious injury.</td>
</tr>
<tr>
<td>• Do not operate the unit when fatigued or under the influence of drugs or alcohol.</td>
</tr>
<tr>
<td>• Do not exceed the maximum working pressure or temperature rating of the lowest rated system component. See <a href="#">Technical Data</a> in all equipment manuals.</td>
</tr>
<tr>
<td>• Use fluids and solvents that are compatible with equipment wetted parts. See <a href="#">Technical Data</a> in all equipment manuals. Read fluid and solvent manufacturer's warnings. For complete information about your material, request MSDS from distributor or retailer.</td>
</tr>
<tr>
<td>• Do not leave the work area while equipment is energized or under pressure. Turn off all equipment and follow the <a href="#">Pressure Relief Procedure</a> when equipment is not in use.</td>
</tr>
<tr>
<td>• Check equipment daily. Repair or replace worn or damaged parts immediately with genuine manufacturer's replacement parts only.</td>
</tr>
<tr>
<td>• Do not alter or modify equipment.</td>
</tr>
<tr>
<td>• Use equipment only for its intended purpose. Call your distributor for information.</td>
</tr>
<tr>
<td>• Route hoses and cables away from traffic areas, sharp edges, moving parts, and hot surfaces.</td>
</tr>
<tr>
<td>• Do not kink or over bend hoses or use hoses to pull equipment.</td>
</tr>
<tr>
<td>• Keep children and animals away from work area.</td>
</tr>
<tr>
<td>• Comply with all applicable safety regulations.</td>
</tr>
</tbody>
</table>

| **FIRE AND EXPLOSION HAZARD** |
| Flammable fumes, such as solvent and paint fumes, in work area can ignite or explode. To help prevent fire and explosion: |
| • Use equipment only in well ventilated area. |
| • Do not fill fuel tank while engine is running or hot; shut off engine and let it cool. Fuel is flammable and can ignite or explode if spilled on hot surface. |
| • Eliminate all ignition sources; such as pilot lights, cigarettes, portable electric lamps, and plastic drop cloths (potential static arc). |
| • Keep work area free of debris, including solvent, rags and gasoline. |
| • Do not plug or unplug power cords, or turn power or light switches on or off when flammable fumes are present. |
| • Ground all equipment in the work area. See [Grounding](#) instructions. |
| • Use only grounded hoses. |
| • Hold gun firmly to side of grounded pail when triggering into pail. |
| • If there is static sparking or you feel a shock, stop operation immediately. Do not use equipment until you identify and correct the problem. |
| • Keep a working fire extinguisher in the work area. |

| **CARBON MONOXIDE HAZARD** |
| Exhaust contains poisonous carbon monoxide, which is colorless and odorless. Breathing carbon monoxide can cause death. Do not operate in an enclosed area. |
### Warnings

<table>
<thead>
<tr>
<th></th>
<th>![Warning Icon]</th>
<th><strong>Warnings</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>![Warning Icon]</td>
<td><strong>TOXIC FLUID OR FUMES HAZARD</strong></td>
</tr>
<tr>
<td></td>
<td></td>
<td>Toxic fluids or fumes can cause serious injury or death if splashed in the eyes or on skin, inhaled, or swallowed.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Read MSDSs to know the specific hazards of the fluids you are using.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>• Store hazardous fluid in approved containers, and dispose of it according to applicable guidelines.</td>
</tr>
</tbody>
</table>

|   | ![Warning Icon] | **SKIN INJECTION HAZARD** |
|   |                   | High-pressure fluid from gun, hose leaks, or ruptured components will pierce skin. This may look like just a cut, but it is a serious injury that can result in amputation. **Get immediate surgical treatment.** |
|   |                   | • Do not spray without Uni-Tip Guard and trigger guard installed. |
|   |                   | • Engage trigger lock when not spraying. |
|   |                   | • Do not point gun at anyone or at any part of the body. |
|   |                   | • Do not put your hand over the Uni-Tip. |
|   |                   | • Do not stop or deflect leaks with your hand, body, glove, or rag. |
|   |                   | • Follow the **Pressure Relief Procedure** when you stop spraying and before cleaning, checking, or servicing equipment. |
|   |                   | • Tighten all fluid connections before operating the equipment. |
|   |                   | • Check hoses and couplings daily. Replace worn or damaged parts immediately. |

|   | ![Warning Icon] | **BURN HAZARD** |
|   |                   | Equipment surfaces and fluid that’s heated can become very hot during operation. To avoid severe burns: |
|   |                   | • Do not touch hot fluid or equipment. |

|   | ![Warning Icon] | **MOVING PARTS HAZARD** |
|   |                   | Moving parts can pinch, cut or amputate fingers and other body parts. |
|   |                   | • Keep clear of moving parts. |
|   |                   | • Do not operate equipment with protective guards or covers removed. |
|   |                   | • Pressurized equipment can start without warning. Before checking, moving, or servicing equipment, follow the **Pressure Relief Procedure** and disconnect all power sources. |

|   | ![Warning Icon] | **PRESSURIZED ALUMINUM PARTS HAZARD** |
|   |                   | Use of fluids that are incompatible with aluminum in pressurized equipment can cause serious chemical reaction and equipment rupture. Failure to follow this warning can result in death, serious injury, or property damage. |
|   |                   | • Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents. |
|   |                   | • Many other fluids may contain chemicals that can react with aluminum. Contact your material supplier for compatibility. |

|   | ![Warning Icon] | **PRESSURIZED ALUMINUM PARTS HAZARD** |
|   |                   | Do not use 1,1,1-trichloroethane, methylene chloride, other halogenated hydrocarbon solvents or fluids containing such solvents in pressurized aluminum equipment. Such use can cause serious chemical reaction and equipment rupture, and result in death, serious injury, and property damage. |

|   | ![Warning Icon] | **PERSONAL PROTECTIVE EQUIPMENT** |
|   |                   | You must wear appropriate protective equipment when operating, servicing, or when in the operating area of the equipment to help protect you from serious injury, including eye injury, hearing loss, inhalation of toxic fumes, and burns. This equipment includes but is not limited to: |
|   |                   | • Protective eyewear, and hearing protection. |
|   |                   | • Respirators, protective clothing, and gloves as recommended by the fluid and solvent manufacturer. |
## Uni-Tip Selection

</table>
Operation

Setup

1. Ground stripper with grounding clamp during Setup and Cleanup.

2. Each time your spray and store, add 3 to 5 drops of Throat Seal Oil (TSO) to decrease packing wear.

3. Check engine oil level. Add SAE 10W-30 (summer) or 5W-20 (winter). See engine manual.

4. Fill fuel tank.

5. If removed, install strainer.

6. Open prime valve. Turn pressure control counterclockwise to lowest pressure.

7. Place siphon tube set in grounded metal pail partially filled with flushing fluid. Attach ground wire to pail and to true earth ground. Do 1. - 5. of Startup to flush out storage oil shipped in stripper. Use water to flush water-base paint and mineral spirits to flush oil-base paint and storage oil.

NOTE: Minimum hose size allowable for proper striper operation is 1/4 in. x 50 ft.
Pressure Relief Procedure

1. Ground striper with grounding clamp.

2. Turn engine OFF.

3. Turn pressure to lowest setting. Trigger gun to relieve pressure.

If you suspect that the Uni-Tip or hose is completely clogged, or that pressure has not been fully relieved after following the steps above, VERY SLOWLY loosen Uni-Tip Guard retaining nut or hose end coupling to relieve pressure gradually, then loosen completely. Then clear tip or hose.

Startup

1. Perform Pressure Relief Procedure.

2. Start Engine.

   a. Move fuel valve to open.

   b. Move choke to closed.

   c. Set throttle to fast.

   d. Set engine switch ON.

   e. Pull starter cord.
f. After engine starts, move choke to open.

5. Hold gun against grounded metal flushing pail. Trigger gun and increase fluid pressure slowly until pump runs smoothly.

3. Increase pressure enough to start pump. Allow fluid to circulate for 15 seconds.

Inspect fittings for leaks. Do not stop leaks with your hand or a rag! If leaks occur, turn striper OFF immediately. Perform Pressure Relief (page 8). Tighten leaky fittings. Repeat Startup, steps 1-2. If no leaks, continue to trigger gun until system is thoroughly flushed. Proceed to step 3.

4. Turn pressure down, close prime valve. Disengage gun trigger safety.

6. Place siphon tube in paint pail.

7. Trigger gun again into flushing fluid pail until paint appears. Assemble Uni-Tip and Uni-Tip Guard.
Gun Operation

Gun Trigger Lock

To prevent injury when the gun is not in use, always engage the gun trigger lock if unit is being shut down or left unattended.

Setup

Make sure striper is turned off and unplugged from power source.

Connect Gun to Striper

1. Attach supply hose to striper fluid outlet.
2. Attach other end of supply hose to gun swivel. Use two wrenches (one on the swivel and one on the hose) to tighten all connections securely.

Uni-Tip and Uni-Tip Guard Assembly

1. Engage trigger safety. Use end of Uni-Tip (A) to press Uni-Tip Seal (B) into Uni-Tip Guard (D), with curve matching tip bore (C).
2. Insert Uni-Tip in tip bore and firmly thread assembly onto gun.

Gun Placement

1. Install Gun: Insert gun into gun holder with head guard pressed against the holder assembly bracket.
2. Tighten gun into clamp.

NOTE: Verify that the gun can still be triggered and that the trigger safety can still be engaged after installation. Make adjustments if necessary.
**Clearing Tip Clogs**

1. Release trigger, engage gun trigger safety. Rotate Uni-Tip. Disengage gun trigger safety and trigger gun to clear the clog. Never point gun toward your hand or into a rag!

2. Engage gun trigger safety, return Uni-Tip to original position, disengage gun trigger safety and continue spraying.

---

**Spraying Gun**

1. Disengage trigger lock.

2. Be sure the arrow-shaped tip faces forward (spray).

3. Hold gun perpendicular and approximately 12 in. (304 mm) from surface. Move gun first, then pull trigger to spray a test pattern.

4. Slowly increase pump pressure until coverage is uniform and even (see striper instruction manual for additional information).

---

**Aligning Spray**

2. Loosen guard and retaining nut.

3. Align guard horizontally to spray a horizontal pattern, vertically to spray a vertical pattern.

---

**Cleanup**

Flush gun after each work shift and store in a dry location. Do not leave the gun or any parts in water or cleaning solvents.
Clean-up

Perform **Pressure Relief Procedure**, page 8.

1. Remove Uni-Tip Guard and Uni-Tip.

2. Clean gun filter, Uni-Tip Guard and Uni-Tip in flushing fluid.

3. Remove siphon tube set from paint and place in flushing fluid. Use water or pump conditioner for water-base paint and mineral spirits for oil-base paint.

4. Turn engine **ON** and start engine.

5. Close prime valve.

6. Hold gun against paint pail. Disengage gun trigger safety. Gradually turn pressure control up until motor begins to drive pump. Trigger gun until flushing fluid appears.

7. Move gun to flushing pail, hold gun against pail, trigger gun to thoroughly flush system. Release trigger and engage trigger safety.

8. Open prime valve and allow flushing fluid to circulate for 1 to 2 minutes to clean drain tube.

9. Raise siphon tube above flushing fluid and run strip for 15 to 30 seconds to drain fluid.
10. Turn engine **OFF**.

11. Wipe striper, hose and gun with a rag soaked in water or mineral spirits.

### NOTICE

If flushing with water, flush again with pump conditioner to leave a protective coating to prevent freezing or corrosion.

12. Clean Uni-Tip, Uni-Tip Guard and gasket with a soft bristle brush to prevent part failure due to dried materials. Assemble parts and attach loosely onto gun.

### Handle Bar Adjustment

To adjust height and angle of handle bars, loosen two nuts (147) and move handle bars to desired position. Then tighten two nuts (147).

**NOTE:** Handle bars can be moved to down position for storage.
Maintenance

Striper

**NOTE:** Minimum hose size allowable for proper striper operation is 1/4 in. x 50 ft.

For detailed engine maintenance and specifications, refer to separate engine manual supplied.

**DAILY:**
- Check engine oil level and fill as necessary.
- Check hose for wear and damage.
- Check gun safety for proper operation.
- Check pressure drain valve for proper operation.
- Check and fill gas tank.

**AFTER THE FIRST 20 HOURS OF OPERATION:** Drain engine oil and refill with clean oil. See engine manual for correct oil viscosity.

**WEEKLY:**
- Remove air filter cover and clean element. Replace element if necessary. If operating in an unusually dusty environment, check air filter daily and replace if necessary.
- Check level of TSO in fluid pump packing nut. Add 3 to 5 drops if necessary. Keep TSO in nut to help prevent fluid buildup on piston rod and premature wear of packings.
- Change engine oil. See engine manual for correct oil viscosity.

**SPARK PLUG:** Use only BPR6ES (NGK) or W20EPR-U (NIPPONDENSO) plug. Gap plug to 0.028 to 0.031 in. (0.7 to 0.8 mm). Use spark plug wrench when installing and removing plug.

**Swivel Wheel**

- Stripers are factory aligned, but if necessary, loosen two bolts (128) on swivel wheel assembly just enough to be able to move the wheel by hand. Align wheel and re-tighten bolts.
- Place turnbuckle (43) over the two mounting numbs on the frame.
- Pressurize the unit with water and Pioneer’s Pump Conditioner and spray out several lines with the swivel assembly in the locked position. Use the turnbuckle to fine tune the alignment of the wheels until the stripes are straight.
- Tighten the jam nuts on the turnbuckle to affix the turnbuckle length for future reference.
- Tighten the ratchet handles.

**Drive Wheel**

**NOTICE**

The drive wheel is designed to slip. When adjusting drive wheel, do NOT over-tighten castle nut (see page 34). Axle could become locked and damage the drive assembly.

**Curves and Arcs**

- Similar to the above, except that the swivel wheel assembly is set at an angle. The swivel assembly can be adjusted to 30 degrees either side of straight ahead. If you have arcs that you paint regularly, purchase additional turnbuckles (43) and keep them set to those arc sizes.
**Pump**

- Always stop the pump at the bottom of its stroke when you take a break or at the end of the day. This helps keep material from drying on the rod, damaging the packings.

- Keep the displacement pump packing nut/wet cup 1/3 full of Throat Seal Oil (2501) at all times. The TSO helps protect the packings and rod.

- Lubricate Connecting Rod Pin every three months.

- Inspect the packing nut daily. The paint pump has a patented “Triple Life Packing System”. Packing life will be extended a minimum of three times if the proper packing tightening procedure is followed.

**PACKING TIGHTENING PROCEDURE:**
Inspect the packing nut daily. If seepage of paint into the packing nut and/or movement of the piston upward is found (while not spraying), the packing nut should be tightened enough to stop leakage only, but not any tighter.

**NOTICE**

Do NOT over-tighten packings. Packings will become damaged and reduce the packing life.

**Grease Points**

- Fill grease points at swivel wheel and in center of drive assembly axle until grease purges from end collars. Wipe away any excess grease. Use only quality-grade water resistant grease.
Gun

Cleaning/Replacing Filter
1. Perform **Pressure Relief Procedure**, see page 8. Engage trigger lock.
2. Disconnect hose.
3. Disconnect trigger guard (404) from guard retainer (422).
4. Unscrew handle (423) from gun.
5. Remove filter (406) through top of handle.
6. Clean filter using a soft brush.
7. Insert clean filter into handle.
8. Reattach handle to gun. Tighten securely.
9. Reconnect trigger guard to guard retainer.

Replacing Needle
1. Perform **Pressure Relief Procedure**, see page 8. Engage trigger lock.
2. Remove tip (415) and guard (402). Disconnect hose.
3. Disengage trigger lock.
4. Squeeze trigger while unscrewing diffuser/seat (401). For newer gun kits, remove needle housing (411) and gasket (417).
5. Remove locknut (433) and end cap (408).
6. Tap out needle (401b) using a plastic hammer.
7. Use a soft brush to clean internal passages of gun.
10. Install end cap and lockout, loosely.
11. For needle housing (411), apply medium strength (blue) thread sealant to threads.
12. Squeeze trigger while installing needle housing. Torque to 26-32 ft-lb (35-43 N•m).

Adjusting Needle
1. Perform **Pressure Relief Procedure** (page 8). Engage trigger lock.
2. Remove tip (415) and guard (402). Disconnect hose.
3. Disengage trigger lock.
4. Hold gun with nozzle pointing up. Turn locknut (433) clockwise (CW) until you see and feel trigger (403) raise slightly.
5. Turn locknut 3/4 turn counter-clockwise (CCW). When properly adjusted, trigger will move freely.
7. Trigger gun into pail until fluid flows from gun.
10. If the gun fails either test, repeat steps 1-9.
# Troubleshooting

## General Troubleshooting

<table>
<thead>
<tr>
<th>Problem</th>
<th>Cause</th>
<th>Solution</th>
</tr>

</table>
Repair

Pail Bracket

Removal
1. Remove pail (103).
2. Remove two screws (22) and remove pail bracket (88).

NOTE: The pail bracket is adjustable to fit different pail configurations.

Installation
1. Replace pail bracket (88) and tighten two bolts (22).
2. Replace pail (103).
**Pressure Sensor**

### Removal

1. Perform **Pressure Relief Procedure**, page 7.
2. Remove pail (103).
3. Use small phillips screwdriver to remove four screws (13) and remove control box cover (13).
4. Squeeze sides of pressure sensor connector to disconnect pressure sensor wire from control board (17). Pull pressure sensor wire through access hole in bottom of control box (13).
5. Use two wrenches to unscrew pressure sensor (209) from swivel fitting (216).
6. Remove pressure sensor (209).

### Installation

1. Install new pressure sensor (209) and tighten onto swivel fitting (216).
2. Feed pressure sensor wire through access hole in bottom of control box (13). Connect pressure sensor wire to control board (17).
3. Replace control box cover (13) and use a small phillips screwdriver to tighten four screws (13).
4. Replace pail (103).

**NOTICE**

Be careful not to overtighten four screws (13). They can easily become stripped or damaged.
Pressure Control and Circuit Board

Removal

1. Perform Pressure Relief Procedure, page 7.
2. Remove pail (103).
3. Use small Phillips screwdriver to loosen four screws (13) and remove control box cover (13).
4. Use a small Allen wrench to loosen screw in pressure control knob (18). Remove knob.
5. Remove spacer (189) then loosen and remove hex nut (17) from pressure control.
6. **Single Engine Wire Models:** Loosen grounding nut and screw on board heat sink and remove ground wire.

**Double Engine Wire Models:** Disconnect all wires to circuit board and Honda engine. Be sure to mark all wires to refer to when reconnecting, or refer to Wiring Diagram (see page 41).
7. Remove circuit board and pressure control (17).

Installation

1. Install new circuit board and pressure control (17).
2. **Single Engine Wire Models:** Replace grounding wire and tighten grounding nut and screw on board heat sink.

**Double Engine Wire Models:** Reconnect wire(s) to circuit board and place wires back into control box.
3. Install and tighten hex nut (17) and replace spacer (189) onto pressure control.
4. Turn pressure control fully clockwise and install knob (18) (knob should point to arrow on label). Use Allen wrench to tighten screw on knob.
5. Replace control box cover (13) and use a small Phillips screwdriver to tighten four screws (13).
6. Replace pail (103).
Drain Valve

Removal
1. Perform Pressure Relief Procedure, page 7.
2. Remove drain line (138) and fitting (119).
3. Use a wrench to loosen drain valve (113) and remove it from pump (211).

Installation
1. Thread drain valve (113) into pump (211) opening.
2. Hand tighten securely. Use a wrench to tighten new drain valve into pump. **NOTE:** Tighten drain valve so fitting (119) will install from bottom.
3. Replace fitting (119) and drain line (138).
Fluid Pump

Removal

1. Perform Pressure Relief Procedure, page 7.
2. Flush material out of stripper.
3. Disconnect drain line from the pump (211).
4. Remove connecting rod shield (205).
5. Slowly cycle pump to move piston rod so that connecting rod pin is visible.
6. Disconnect pressure sensor (209) from the pump (211) by holding sensor in place with a wrench and unscrewing the swivel fitting (216) with an additional wrench.
7. Remove retaining ring from connecting rod and slide sleeve down revealing connecting rod pin.
8. Remove hose fittings and drain valve (113).
9. Remove siphon tube/hose assembly from fluid pump by unscrewing suction nut with packing adjustment tool.

**NOTE:** When siphon tube (135) is removed from pump intake, be sure to catch ball cage, ball, ball seat, and o-ring or they will fall to the floor. Keep these pieces together in the same order.

10. Use wrench to unscrew two bolts (128) from front cover assembly (the fluid pump will hang loosely).
11. Remove connecting rod pin out of connecting rod to allow for removal of fluid pump from stripper.

**NOTICE**
Do not turn the sensor. The cable will become damaged.
Repacking the Pump

NOTE: The packing kit comes completely assembled (except for the packing holder 509) ready for installation. There is no need to break it apart. Reuse your old packing holder (509).

1. Unscrew and remove the packing nut (516).
2. Push the piston rod (517) down through the packings and out of the pump.
3. Use the packing removal tool (866435) to push up through the bottom of the fluid pump and remove from the top, bringing the packings, spacer, springs and holder along with it, leaving the fluid body (505) empty.

NOTE: Make sure all old packings and glands have been removed from the fluid body.

4. Clean the inside of the fluid body.
5. Lightly lubricate outside of new packing kit assembly (331210) with a light weight oil or Throat Seal Oil.
6. Replace black o-ring (502) and the white o-ring (501) on the packing holder (509), with the new o-rings from the packing kit.
7. Slide the packing holder on top of the new upper packings.
8. Slide the complete packing assembly down into the clean fluid pump body (505).
9. Install packing nut (516) loosely, not putting any pressure on new packings.
10. Remove the plastic packing tool (311465) down through bottom of fluid pump body. Lightly lubricate inside of the new packings with light weight oil or Throat Seal Oil.

11. Replacing the Outlet Valve Parts:
   a. Place piston holder (331195) in a vise and slide piston into holder and lock in place with a 3/8 in. dowel.
   b. Use a 1/4 in. allen wrench to unscrew the outlet seat retainer (517f) from the piston.
   c. Remove the outlet seat (517d), o-ring (517e) and outlet ball (517c).
   d. Inspect the outlet ball, o-ring and seat for wear. Replace as necessary.
   e. While piston is still locked in the holder, install parts back into the piston in the following order: ball, outlet seat, and o-ring.

NOTE: The outlet seat needs to be oriented properly when assembling so that the inside diameter edge chamfer of the seat faces up (mating to ball).

f. Before reinstalling the outlet seat retainer, apply two drops of (113500) thread sealant on threads and torque to 20 ft-lb.

12. Slip the piston rod (517) up through the bottom of the fluid pump body, through the packings and into its upper position.

13. Tighten the packing nut until you feel a slight resistance against the Belleville Springs (513). Use the packing adjustment tool (865008), tighten another 3/4 of a turn.
Installation

1. Loosen the packing nut and ensure that the piston rod (517) is in its upper position in the fluid pump body. Slip the sleeve (206) and the retaining ring (203) over the piston rod.

2. Push the piston rod up into the connecting rod (199) and align the holes. Insert the connecting rod pin (214) through the connecting rod and piston.

3. Slip the sleeve over the connecting rod pin and insert the retaining ring into the groove on the connecting rod.

4. Push the two bolts (128) through the tube spacers (204) and screw them into cover assembly (210). Use a torque wrench to tighten two bolts evenly (alternating between them) to 20 ft-lb.

5. Reattach hose fittings and drain valve (113). Use plumbers tape around threads to ensure a good seal.

6. Reassemble the lower suction valve assembly by placing the suction seat assembly (o-ring, seat, suction ball, and suction ball guide) in the suction nut and screw onto the pump body.

7. On pumps with electronic pressure control, reconnect the sensor to the pump body (211). Hold the sensor with a wrench while tightening the swivel fitting (216) with an additional wrench.

8. Start stripper and operate slowly to check piston rod for binding. Readjust the two bolts to eliminate binding if necessary.

9. Tighten packing nut until slight resistance is felt against the belleville spring (these springs retain internal tension against the packings), then tighten an additional 3/4 turn. Place five drops of Throat Seal Oil into the packing nut.

10. Run the stripper at full pressure for several minutes. Perform Pressure Relief Procedure, see page 8, and readjust the packing nut (see step 8).

11. Install connecting rod shield so that the small hole is in the upper right hand corner.
**Clutch**

**Removal**

1. Perform **Pressure Relief Procedure**, page 7.
2. Remove pail (103).
3. Disconnect and remove siphon and drain tubes. **NOTE:** When siphon tube is removed from pump intake, be sure to catch ball cage, ball, ball seat, and o-ring or they will fall to the floor. Keep these pieces together in the same order.
4. Remove **Control Board Cover**, page 23.
5. Disconnect pressure sensor wire, page 22.
7. Remove four screws (169) on clutch housing cover (130) and remove cover.
8. Cut plastic wire holder (be careful not to cut wires) and disconnect clutch wire. Mark wires to refer to when reconnecting.
9. Remove four top screws (175) and two bottom screws and nuts (173) and remove gear box (191).
10. Use a small pliers to remove clutch retaining clip (8S).
11. Place clutch housing on a flat surface and use two pry bars to evenly lift clutch off of shaft.

**Installation**

1. Install key into shaft.
2. Install edge grommet onto side of clutch orientation tab. **NOTE:** If the clutch is not installed correctly, a loud rattle will be heard during operation.
3. Align new clutch with keyway and push clutch (8U) onto shaft.
4. Install clutch retaining clip (8S).
5. Align clutch orientation tab with slot on gear box and replace clutch housing (191G). Tighten screws (173 and 175). Check gap between clutch and clutch plate (clutch should be .010 to .015 in. from gear box).
6. Route wires through tie strap and secure into place.
7. Replace clutch housing cover (130) and tighten four screws (169).
10. Replace **Control Board Cover**, page 23.
11. Reconnect siphon and drain tubes.
12. Replace pail (103).
Gear Box

Removal

1. Perform **Pressure Relief Procedure**, page 7.
3. Disconnect and remove all hoses. **NOTE:** When siphon tube is removed from pump, be sure to catch ball cage, ball, ball seat, and o-ring or they will fall to the floor. Keep these pieces together in the same order.
5. Remove **Pump**, page 25.
7. Remove gear box (191).

Installation

1. Replace gear box (191).
2. Replace **Clutch**, page 28.
5. Reconnect all hoses.
Repair

Drive Chain

Removal

1. Perform Pressure Relief Procedure, page 7.
3. Remove four bolts (22) and remove bottom engine cover (89).
4. Loosen four bolts (22) on engine mount bracket (1) and tap with mallet to move bracket toward large sprocket (76) to loosen chain.
5. Remove two bolts (22) and remove top chain guard cover (80).
6. Slowly turn tire (86) by hand to rotate chain (78) and locate master link. Disassemble and remove master link.
7. Remove chain (78)

Installation

1. Install new chain (78) and connect master link.
2. Use a rubber mallet to tap engine bracket away from large sprocket (76) until chain is tight.
3. Replace top chain guard cover (80) and tighten two bolts (22).
4. Tighten four bolts (22) on engine bracket mount (1).
5. Replace bottom engine cover (89) and tighten four bolts (22).
Repair

Drive Assembly

Removal
1. Perform Pressure Relief Procedure, page 7.
4. Remove four screws (169) and washers and remove clutch housing cover (130).
5. Loosen screw on drive engage cable (14) from drive assembly arm and remove spring (300B).
6. Use allen wrench to loosen two set screws on bearing (52) on each side of drive assembly (300A).
7. Remove two nuts and bolts (53 and 54) on bearing shaft collar flanges (52) on each side of drive assembly.
8. Slide shaft collar flanges and slide bearings in and remove drive assembly (300A).
9. Slowly turn pulley wheel (72) by hand while pushing belt (81) off of pulley to remove belt.
10. Slide one bearing (52) off drive assembly.
11. Remove retaining clip (300D) and remove pulley (72) from drive assembly.
12. Slide drive assembly (300A) off drive shaft (56).

NOTE: Pulley wheel (72) is held into position with woodruff key. Retain key for reinstallation.

Installation
1. Slide new drive assembly (300A) onto drive shaft (56).
2. Install woodruff key (300F) onto drive shaft (56).
3. Install pulley (72) onto drive shaft (56) and woodruff key (300F) and install retaining clip (300D).
4. Slide bearing (52) back onto shaft. Note the orientation (do NOT install backwards).
5. Slowly turn pulley wheel by hand while pushing belt (81) onto large sprocket (72) to install belt.
6. Replace drive assembly (300A) and slide shaft collars and bearings (52) into frame.
7. Tighten four nuts and bolts (53 and 54) on shaft collar flanges on engine mounting bracket (1).
8. Use rubber mallet to tap on small sprocket (55) until it becomes aligned with drive chain sprocket (76). Hold a straight-edge to both sprockets to make sure they are properly aligned (see page 35).
9. Use allen wrench to tighten two screws on bearings (52) on each side of drive assembly.
10. Install drive engage cable (14) to drive assembly arm, replace spring (300B), and tighten screw. Check cable engagement and make adjustments if needed.
11. Replace clutch housing cover (130) and tighten four screws (169) and washers.
12. Replace Drive Chain, page 30.
Repair

Engine

For further information on engine maintenance and repair, see Honda Engine manual.

Removal

1. Perform Pressure Relief Procedure, page 7.
3. Remove Gear Box, page 29.
4. Remove Drive Chain, page 30.
5. Remove Drive Assembly, page 31.
6. Remove three set screws (8C) and clutch adapter (8A). Remove key (8F) from shaft.
7. Remove four hex nuts (8M) and washers (8K) between clutch housing and engine.
8. Disconnect engine wire(s). Be sure to mark wires to refer to when reconnecting.
9. Use wrench to remove four engine bolts (5) and remove engine (3) from engine mount bracket (1).

Installation

1. Install new engine (3) into engine mount bracket (1) and use wrench to tighten four engine bolts (5).
2. Connect engine wires.

3. Replace four hex nuts (8M) and washers (8K) between clutch housing and engine.

4. Install key (8F) into shaft. Replace clutch adapter and tighten three set screws (8C). Clutch adapter plate should be .010 to .015 in. from clutch.

5. Replace Drive Assembly, page 31.

7. Replace Gear Box, page 29

Tires

Removal
1. Perform **Pressure Relief Procedure**, page 7.
2. Remove hairpin (87).
3. Use wrench to remove castle nut (32).
4. Remove washers (84 and 85) and tire (86).

Installation
**NOTE:** Apply quality-grade water resistant grease to axle and all washer surfaces prior to assembly.
1. Install spacer and washers (84 and 85) onto axle (75). **NOTE:** Make sure cupped sides of washers face the wheel hub.
2. Install tire (86) and remaining spacers and washers.
3. Install castle nut (32) and hand tighten.
4. Use a wrench to turn castle nut (32) an additional 3 1/2 full turns. Insert hairpin (87) through castle nut slots.

Castle Nut Adjustment
- Restrain opposite tire from turning while tightening nut with wrench.
- If tires slip too much, remove hairpin (87), and tighten castle nut (32) one notch clockwise.
- If tires turn with too much resistance, remove hairpin and turn castle nut (32) one notch counterclockwise.
- Tire tension should be tested again while operating unit to verify correct tension.
- Make sure all washers are oriented so that the cup is facing the wheel.

**NOTICE**
The drive wheel is designed to slip when adjusting the drive wheel. Do NOT over-tighten castle nut. The axle could become locked and damage the drive assembly.
**Wheel Axle**

**Removal**

1. Perform **Pressure Relief Procedure**, page 7.
2. Remove **Drive Chain**, page 30.
3. Set unit on blocks to elevate wheels.
4. Remove **Tires**, page 34.
5. Use socket with extension to remove two bolts (22) in bottom chain guard (79).
6. Use allen wrench to remove two set screws and slide sprocket (76) off axle (75). Remove sprocket square key (82) on axle. **NOTE:** It may be necessary to use a rubber mallet to tap sprocket off of axle.
7. Use allen wrench to loosen screws on shaft collars (250 and 251) and remove collars.
8. Remove axle (75).

**Installation**

**NOTE:** Apply quality-grade water resistant grease to entire axle surface prior to assembly.

1. Replace axle (75) as shown above.
2. Replace shaft collars (250 and 251) and use wrench to tighten screws.
3. Install sprocket key in axle as shown above. Slide sprocket (76) on and use allen wrench to tighten two setscrews.
4. Use grease gun to fill grease inlet until grease appears between axle and outer collars.
5. Use straight edge to align small and large sprockets.
6. Slide collar against frame and tighten set screw.
7. Slide opposite collar against frame and tighten set screw.
8. Replace bottom chain guard (79) and use socket with an extension to tighten two bolts (22).
9. Replace **Tires**, page 34.
10. Replace **Drive Chain**, page 30.
# Parts List

Technical Data

Brite Stripe 3000SP Stripper:

Honda GX160 Engine
   Power Rating @ 3400 rpm
   ANSI .................................................. 5.5 Horsepower
   DIN 6270B/DIN 6271
     NA .................................................. 2.9 Kw - 4.0 Ps
     NB .................................................. 3.6 Kw - 4.9 Ps
   Maximum working pressure ......................... 3000 psi (206 bar, 20.6 MPa)
   Noise Level
     Sound power ........................................ 105 dBa, per ISO 3744
     Sound pressure ................................. 96 dBa, measured at 3.1 feet (1 m)
   Maximum delivery
     Brite Stripe 3000SP ............................... 0.8 gpm (3.6 liter/min)
   Maximum tip size
     Brite Stripe 3000SP ............................... 1 gun with 0.029 in. tip
   Inlet paint strainer ................................ 16 mesh (1190 micron) stainless steel screen, reusable
   Outlet paint strainer .............................. 50 mesh (250 micron) stainless steel screen, reusable
   Pump inlet size ....................................... 3/4 in. npt (m)
   Fluid outlet size ...................................... 1/4 npsm from fluid filter
   Wetted parts .......................................... nickel-plated carbon steel, PTFE, Nylon, polyurethane, UHMW polyethylene, fluoroelastomer, acetal, leather, tungsten carbide, stainless steel, chrome plating

Dimensions:

Model 867786
   Weight (dry, without packaging) .................... 188 lb (85.2 kg)
   Height ................................................. Handles Down: 29.75 in. (76 cm) / Handles Up: 45 in. (114 cm)
   Length ................................................ Handles Down: 54 in. (137 cm) / Handles Up: 63 in. (160 cm)
   Width ............................................... 26.5 in.

Gun:

*Measured at 3.1 ft (1 m) while spraying water-based paint, specific gravity 1.36, through a 517 tip at 3000 psi (207 bar, 20.7 MPa) per ISO 3744.
PIONEER LIMITED WARRANTY

PIONEER warrants the Brite Striper 3000SP manufactured by it to be free from defects in material and workmanship on the date of sale by an authorized PIONEER Distributor to the original purchaser. Pioneer will, for the period of twelve (12) months from the date of sale, repair or replace any part of the equipment proven defective. This warranty applies only when the equipment is installed, operated and maintained in accordance with Pioneer’s written recommendations.

This Warranty does not apply to equipment which has been resold or rented, or has damage from wear caused by abrasion, corrosion or misuse, negligence, accident, faulty installation or tempering in a manner to impair normal operation, inadequate or improper maintenance or substitution of non-Pioneer component parts.

This warranty is conditioned upon the prepaid return of the equipment claimed to be defective to a Pioneer authorized service center for verification of the claim. If the claim is verified, Pioneer will repair or replace free of charge any defective parts. The equipment will be returned to the original purchaser transportation prepaid. If inspection of the equipment does not disclose any defect in material or workmanship, repairs will be made at a reasonable charge, which charges may include the costs of parts, labor, and transportation.

Pioneer makes no warranty, and disclaims all implied warranties of merchantability and fitness for a particular purpose, with respect to accessories, equipment, materials or components sold but not manufactured by Pioneer. These items sold, but not manufactured by Pioneer, such as engines, hoses, etc, are subject to warranty, if any, of their manufacturer. Pioneer will provide purchaser with reasonable assistance in making any claim for these warranties.

TO PLACE AN ORDER OR FOR SERVICE, contact Pioneer at 1–800–877-1500 (fax 1-800-877-1511) to identify the nearest service center.

All written and visual data contained in this document reflects the latest product information available at the time of publication. Pioneer reserves the right to make changes at any time without notice.
