

Blitz 2.0 & Blitz Gel **What's New**

- Two new removal solutions that are more environmentally friendly
- Products that can be shipped via any transportation method, including by air
- Formulas that meet regulatory standards for shipping with a removable lid (making recycling much easier when the pail is empty)
- A new, pleasant smell and a soft blue hue
- Can be applied using standard application equipment (backpack sprayers, pump sprayers, etc.)

Blitz 2.0

- Helps you easily remove Pioneer's GameLine synthetic turf paints
- Slower evaporation rate than our original Blitz formula means more working time before re-application (if needed at all)
- Faster removal of GameLine paint compared to our original Blitz formula
- Can be applied through most spray applicators, including Pioneer's P-REX Remover & Extractor
- Can be used with temperatures of 32°F and above

Blitz Gel

- Blitz Gel remover solution assists with the GameLine paint removal process
- Faster removal of GameLine paint compared to our original Blitz and Blitz HT formulas
- Same chemical composition as Blitz 2.0, but with an added thickener that increases viscosity and slows the evaporation rate
- The longest working time of any of our remover solutions makes Blitz Gel a great option when working in hotter weather
- Can be used with temperatures of 32°F and above
- Applies well with most spray applicators, but not recommended for Pioneer's P-REX
